Fetch Content Prompt

Objective

Retrieve webpage content using the URL supplied by the Get Content Source input. Call the connected Get Webpage tool and pass the supplied URL to it. Return the retrieved webpage text to the next workflow step.

Input

URL to fetch:
{{"type": "in", "path": "node_step_source_url", "title": "Get Content Source"}}

Connected tool:
{{"type": "tool", "path": "embed://a2/tools.bgl.json#module", "title": "Get Webpage"}}

Output Format

Return the retrieved webpage text as plain text. Preserve the article's main headings and paragraphs where possible. Do not summarize the article in this step.

Error Handling

If retrieval fails or returns empty content, clearly state that the webpage content could not be retrieved. Do not invent article content or ask the user to extract a URL from article text.
