Generate Content Summary Prompt

Objective

Summarize the article text received through the Retrieved Article input. Follow the requirements provided through the User Instructions input, including length, format, language, tone, and level of detail.

Use only the retrieved article content as the factual source. Do not ask the user to provide the article text or URL again.

User Input / Context

Retrieved Article:
{{"type": "in", "path": "node_step_retrieved_article", "title": "Fetch content"}}

User Instructions:
{{"type": "in", "path": "node_step_user_instructions", "title": "User Instructions"}}

Output Format

Return the completed summary in the format requested by the user. If the user requests three bullet points, return exactly three bullet points. Keep the language clear and follow all requested constraints.

Error Handling

If the retrieved content is empty or contains a retrieval error, explain that the article could not be retrieved instead of inventing a summary. Do not ask follow-up questions when the required inputs are already available.
